

## STUDENT CONTRIBUTION

| Student                          | Contribution                                                                                                                                                                                                                                    |
|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Puyat, Doreen Marie G.</b>    | Literature Lead — research paper selection and citation, background and research question analysis, SRA accession identification, and original study design overview.                                                                           |
| <b>Bahian, Celine R.</b>         | Galaxy Lead — genome and annotation preparation, read quality assessment using FastQC and MultiQC, sequence alignment with HISAT2, read counting with featureCounts, differential expression analysis using DESeq2, and workflow documentation. |
| <b>Torres, Rica Jane M.</b>      | Interpretation Lead — analyzes the mapping results, selects the top 5 genes, explains their functions, compares the findings with the original paper, and summarizes the limitations and conclusions.                                           |
| <b>Melon, Kris Bernadette S.</b> | Data Lead — collects and organizes accession numbers, genome/annotation details, mapping and count tables, and DE results, while checking and formatting the data.                                                                              |
| <b>Duhaylongsod, Jil M.</b>      | Documentation Lead — prepares the README, organizes the GitHub repository and file structure, compiles the evidence, and handles the final assembly and review.                                                                                 |
